

BIOELECTROPORATION + ELECTROSTIMULATION

Power gathered in *Bioelectroporation*

A Bioelectroporation equipment that offers integral therapy for aesthetic treatments. The introduction of active products called Bioelectroporation is complemented with the therapeutic effects of *Electrostimulation and Electroanalgesia*.

BioStim® allows faster and more effective results in corporal treatments than those achieved with the traditional topical methods.

CELLULITE • STRETCH MARKS • DERMIC FLABBINESS
INTRODUCTION OF ACTIVE PRINCIPLES • ANALGESIA

FACIAL HANDPIECE
incorporated
with 2 electrodes

CORPORAL HANDPIECE
incorporated with
8 electrodes

SPECIFICATIONS

EASY TO TRANSPORT

A new BioStim model thought to adapt to all of your spaces

Table top size

Facial Handpiece incorporated with 2 electrodes

Corporal Handpiece incorporated with 8 electrodes

Practical compartment saddlebag for accessory organization

Weight: 13 kg

Dimensions: width 55 cm - depth 55 cm - height 42 cm

Keyboard: Membrane, 9 keys

Timer: 00 - 99 minutes

Potency: Adjustable, 00-99%

BioStim®

EQUIPMENT

A sophisticated line

A new design that gives practicality, comfort and better equipment performance.

Built with top quality materials and respecting the **BioStim®** elegant and sober lines.

The evolution of the **BioStim®** allows the new line of equipments to be easily transportable occupying a reduced space inside a consulting room.

Bioelectroporation

The specific electromagnetic wave produces a transient poration of the cellular membrane, which allows the passing of active principles directly into the cell, getting a fast and effective response. The applied product should be selected according to the patient's needs and treatment.

Therapeutic effectiveness

BioStim® makes it possible to combine the beneficial effects of Electroporation with the ones rendered by excitomotive currents, corporal toning and modeling. It is also possible to produce analgesia and favor the performance of a bioelectrical lymphatic drainage.

BioStim® has the additional component of *low frequency exitomotor currents* that favor toning and modeling offering efficient results.
