

CaviStar[®] RF⁽⁶⁾ SYSTEM

Distributed by MEDISTAT International S.A.R.L

CAVITATION 3RD GENERATION

The best combination for *your body*.

The real *Cavitation* with the most potent and effective *6MHz Radiofrequency*. A combination that guarantees the results that your patients are looking for. Equipped with the *Immediate Global Connectivity technology*.

LOCALIZED ADIPOSE REDUCTION • EXCESS WEIGHT • CELLULITE

IGC The connectivity at your reach, Immediate Global Connectivity offers a world of possibilities. Remote Updates – Novelties – Protocols – Applications and franchise control program.

SPECIFICATIONS

WITH IMMEDIATE GLOBAL CONNECTIVITY TECHNOLOGY

CAVITATION

Frequency 28KHz
Maximum Potency 3W/cm²
Functioning Mode: Pulsed and Continuous

6MHz RADIOFREQUENCY

Tension output 200Vpp
Frequency 6MHz

USB Port

Internet Connection
10" LCD Display
Touchpad Command

CaviStar® RF SYSTEM

EQUIPMENT

A sophisticated line

A new design that gives practicality, comfort and better equipment performance.

A powerful software

The easiness of its use, perfectly combined with a simple and attractive interface makes these equipments an indispensable tool for your business. Includes a software that can be updated through IGC.

The real Cavitation

Cavistar has demonstrated to be the only one with real provable effects, therefore the innovation goes hand in hand with the results and in this occasion evolving towards the most requested in the market.

6MHz Radiofrequency

The 6MHz Radiofrequency is an excellent alternative to obtain non invasive reaffirmation for aged and flabby skin.

The dermic heating generated by this frequency reaches the desired temperature in less time than at lower frequencies. Due to this, the RF sessions and the complete treatment times are reduced. The thermic effect generated by the radiofrequency will produce in the dermis the following reactions:

- Hyperaemia
- Fibroblastic stimulation
- Increase in temperature in dermic levels

These reactions are used to give more firmness and quality to the skin. The result is a smoother skin and an evident reduction of wrinkles and flaccidity, as well as the "orange skin" very characteristic of the cellulite.

The cooling of the cooler protects the epidermis from overheating. It gives protection to the skin's superficial layers from an excessive amount of temperature and also favors the obtaining of the denominated contrast effect.

What is Cavitation?

Cavitation is a phenomenon produced by mechanic waves in a liquid. It consists in the generation of variation of pressure which's consequence is the production of micro bubbles in the biological liquid, which are gradually fractured, generating impact waves.

What effects does it produce?

The impact waves generated by the Cavitation produces the disruption of the adipose's cellular membrane with the resulting diffusion of the lipidic matrix (triglyceride) to the interstitial space. The process in which the lipidic content is dispersed in the interstitial liquid is denominated as emulsification. Therefore, we can infer that the result of the fat tissue's ultrasonic cavitation is the emulsification of the lipic content.

Cavitation is a non-invasive treatment. It does not require hospitalization or anesthesia. The patients can retake their normal daily activities immediately after every session.

Indications

- Localized Adiposities
- Excess weight
- Cellulite

Results

The obtained result is the reduction of the thickness of the adipose tissue's fold since the first session.

Radiofrequency 3D

The heat produced in the tissue by the passage of the 6mhz RF is an excellent alternative to obtain non invasive reaffirmation of flabby and aged skin.

The controlled heating generated at this frequency reaches a superficial cutaneous temperature between 38-42 ° C, capable of stimulating the existing dermic collagen and producing a transition process in the denominated collagen contraction.

These reactions are used to give more firmness and quality to the skin. The result is a smoother skin and an evident reduction of wrinkles and flaccidity, as well as the "orange skin " very characteristic of the cellulite.

The cooling of the cooler protects the epidermis from overheating. It gives protection to the skin's superficial layers from an excessive amount of temperature and also favors the obtaining of the denominated contrast effect.
