

Oxy Touch

Oxygen peeling system

- New Aspect for Skin Rejuvenation
- For a better way to create brighter looking skin from head to

You'll be happy only to see it, **Oxy touch**
Surpasses Microdermabrasion Capabilities

Introduction

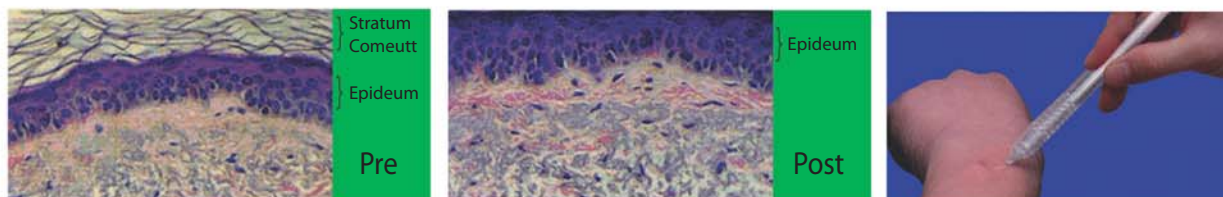

New anti-aging techniques are allowing women to look younger for far longer. Oxy touch provides a supersonic two-phase jet to peel the superficial layers of the skin. A jet spray is applied to the skin to be treated through a specially designed delivery unit and unique handpiece.

The jet spray, consisting of micro droplets of saline solution and gas, impinges on the skin. This high velocity spray is designed to remove the desired deepness of the skin gently and accurately for skin rejuvenation.

- With using only oxygen and saline solution which are totally different system from other conventional dermabrasion.
- Oxy touch is capable of removing the epidermis layer of the skin, thereby increasing the oxygenation of the dermal layer.

Features

A painless procedure with absolutely no patient downtime
Short-term results evolving tissue metabolism and remodeling for refreshment.
Available dermabrasion for superficial and deep tissue
No dead or burned tissue remain
